SLIDING SYSTEMS FROM DECEUNINCK BRING MORE  
SPACIOUSNESS AND FREEDOM TO YOUR HOME

**deceuninck**

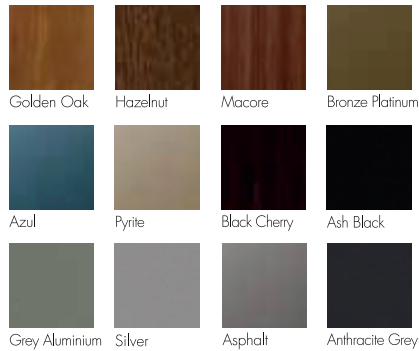

In the design of the Hebeschiebe 76 / Gasket Sliding System, all profiles and accessories are based on the concept of insulation. The casements are 76 mm in width with 4 chambers. The use of support plates with a higher value at the moment of inertia allows for joinery with wider spaces. It is possible to use both aluminum and PVC as the bottom frame. Special gaskets are used in the system to provide an excellent level of insulation. In addition, it is possible to use glazing up to 45 mm in thickness. The Hebeschiebe 76 / Gasket Sliding System provides solutions for all tastes using the variety of color options of Deceuninck.

#### Basic (MX) Colours

#### Solex (FX) Colours

Building a sustainable home

Environment - friendly  
Co-Zn stabilizer is  
used in the production  
of Deceuninck profiles.
